Curriculum Vitae

Jorge Izaguirre

AI Builder | Multi-Agent Systems | Full-Stack Engineer

Personal data

Address:	Las Rozas de Madrid, Spain
Phone number:	+34 684 068 786
Email address:	jorge@izaguirre.eu

Professional summary

Computer Engineer (Universidad Politécnica de Madrid) with hands-on experience designing, building, and maintaining production AI systems. Lead developer of a multi-agent architecture using RAG, LLMs, and an MCP server, with a strong bias toward shipping: prompt design, tool calling, debugging, and iteration. Comfortable partnering with stakeholders and translating business problems into working agentic solutions. Native Spanish and bilingual English; builder mindset suited to customer-facing AI delivery.

Technical experience

AI Engineer at Galileo Studio. 07/2026–Present

- Lead developer of a multi-agent AI system: architecture, RAG pipelines, LLM orchestration, and an MCP server for tool-enabled agent behavior.
- Design how agents reason and act: prompts, tool calls, retrieval strategy, and end-to-end flow from user intent to grounded responses.
- Own production maintenance: evaluate AI outputs with engineering rigor, debug failure modes, and ship iterative fixes.

AI Engineering Intern at Galileo Studio. 02/2026–07/2026

- Built an end-to-end workflow to automate traffic-fine processing with Power Automate and AI, turning a business process into deployable automation.
- Partnered with operational and client constraints to connect technical design to measurable real-world impact.

Software Engineer at Rey Juan Carlos University. 11/2025–06/2026

- Developing a web app that helps medical tutors evaluate nurses in training; shipping a real product in an academic healthcare context.
- Full-stack features with React / TypeScript / JavaScript, Node.js, and SQL; iterate with domain stakeholders on usable evaluation tooling.

Selected impact

- Agentic systems: production multi-agent stack with RAG + MCP (tool use, grounded answers, maintainable agent architecture).
- Business-to-AI translation: traffic-fine automation combining AI with process automation for operational value.
- Hackathon Winner — Best Madrid UPM 2023 (4-person team): creativity, problem solving, and communication under time pressure.

Academic education

- 2022–2026. B.Sc. Computer Engineering. Universidad Politécnica de Madrid (UPM).
- 2020–2022. Science and Technology Bachelor's Degree. Colegio Logos International School.

Technical skills

- AI / Agents: LLMs, Prompt Engineering, RAG, Multi-Agent Systems, MCP, Tool Calling, AI Output Evaluation
- Languages: Python, TypeScript, JavaScript, Java, C, C++, C#
- Web / Cloud: React.js, Node.js, OOP, SQL / Relational Databases, AWS Lambda, Power Automate
- Delivery: Production debugging, iterative shipping, stakeholder communication, client-facing collaboration

Language skills

- Spanish, native.
- English, bilingual.
- French, B2.
